

FRIDAY 2.0 — SNAPSHOT

Current State on Claude Max Plan

Generated: June 07, 2026 — 19:25 UTC

CURRENT SETUP

Component	Status	Notes
Plan	Claude Max	Flat monthly fee, unlimited usage
Model	Claude Sonnet 4.6	Primary; no cost differentiation
Memory	8.95 GB	Active + archived across sessions
Integrations	5 live	Google (Gmail, Drive, Docs, Sheets, Chat), GitHub
Credentials	EDITH vault	Three-factor access, AES-256-GCM encrypted
Framework	Personal	Tanzim_Frameworks repo (GitHub private)

CAPABILITY BASELINE

- Inference: ~72K avg input tokens, 503 avg output tokens per call
- Cache performance: 75–98% hit rate across sessions
- Memory allocation: 120K core + 50K personal framework + 30K working
- Skill library: 79 categories defined; 77 (98%) largely unused

WHAT WORKS WELL

- ✓ Google integrations live (OAuth auto-refresh)
- ✓ GitHub authentication established (PAT in EDITH)
- ✓ Session caching stable (75–98% hit rate)
- ✓ Hindsight memory functional for cross-session context

FRICTION POINTS

- 98% of skill library unused (memory overhead)
- No explicit decision rules in operating system
- Credentials scattered across multiple files (not centralized)
- No verification protocol for EDITH access

- Personal framework implicit, not codified
