

FRIDAY 2.0 — HIGH-LEVEL DESIGN

Security Hardening & Operating System Alignment

OVERVIEW

Friday 2.0 focuses on two pillars: (1) **Security hardening** through EDITH vault and verification protocol, and (2) **Operating system alignment** through codified personal framework with explicit decision rules. On Claude Max, cost optimization is irrelevant; capability and trustworthiness are the goals.

TWO PILLARS

Pillar 1: Security Hardening (EDITH)

Three-factor vault: hardware UUID binding, passphrase authentication, time-window gating. All credentials encrypted AES-256-GCM. Obfuscated naming prevents external reconnaissance. Verification protocol (Q1: Real Madrid, Q2: Pepper Potts, Q3: Myself) gates access to sensitive operations.

Pillar 2: Operating System Alignment (Personal Framework)

Five core principles codified: 30-day rule (auto-design recurring tasks), minimal context (infer intent, act if confidence ≥ 0.75), intent inference (parse patterns), silence protocol (continue autonomously when idle >60 min), execution-first (ship MVP immediately). Framework rules explicit in code, not learned behavior. Decision thresholds quantified.

ARCHITECTURE LAYERS

Layer	Component	Purpose
CORE	Claude Max (Sonnet)	Inference engine, all workloads
SECURITY	EDITH Vault	Three-factor credential storage
	Verification Protocol	Q&A challenge for sensitive ops
FRAMEWORK	Personal Rules (5)	Explicit decision logic
	Confidence Thresholds	Autonomous execution gates
INTEGRATION	Google OAuth (5 services)	Email, Drive, Docs, Sheets, Chat
	GitHub PAT	Repo management, automation

IMPLEMENTATION GOALS

- 1. **Trust** — Explicit decision rules codified; no hidden inference
- 2. **Autonomy** — Execute on clear thresholds; don't wait for permission
- 3. **Security** — All credentials encrypted, three-factor gated, obfuscated
- 4. **Clarity** — Personal framework published (Tanzim_Frameworks repo)

TIMELINE

Phase	Work	Duration
Phase 1	EDITH hardening + verification protocol	1 week
Phase 2	Framework integration + rule codification	1 week
Phase 3	Skill consolidation + memory audit	1 week
Phase 4	Testing + go-live	1 week
